

Combining R and FIJI to detect and characterize Cells on tissue slices

Club BioInfo

CLUET David

Objective:

**Pet study for FIJI <-> R cross-talk with heavy calculations
on FIJI side**

Context: **Study of muscular atrophy**

Model: **Mouse *Tibialis Anterior* transversal section**

Classical approach: **Manual annotation**

12h of manual annotation

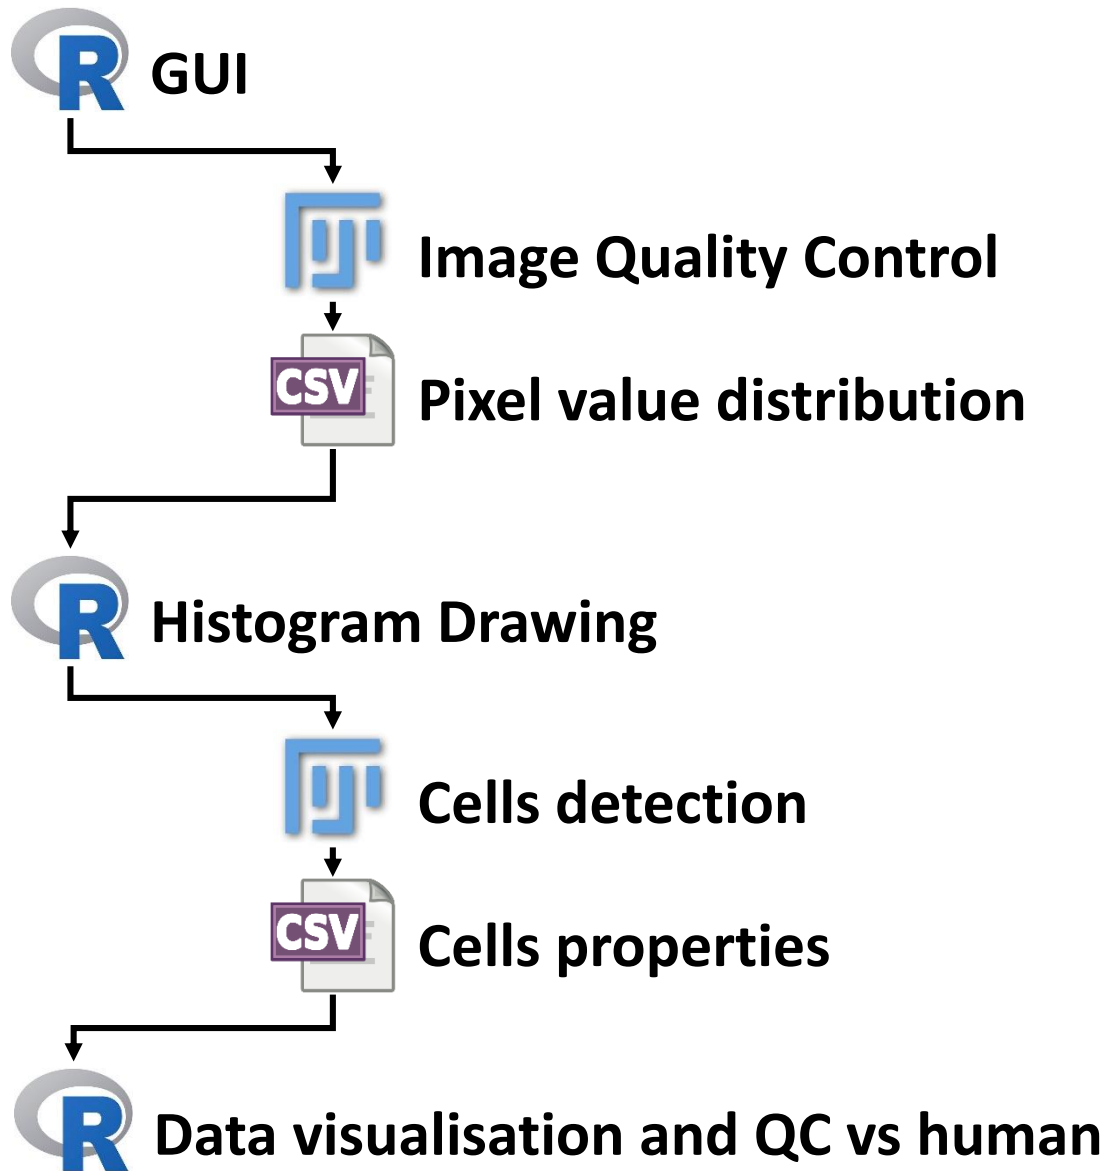

- Standard tool for image analysis
- Easy and fast programming
- **Basic plot possibilities**
- **No statistics implemented**
- **No native solution for reports**

- Standard tool for image analysis
- Easy and fast programming
- **Basic plot possibilities**
- **No statistics implemented**
- **No native solution for reports**

- Standard tool for data visualization
- Statistics implemented
- **ggplot!!!**
- **Rmarkdown**
- **Shiny**
